Muhammad Azmi

Bengkalis, Indonesia | +62 81362914006 | azmi.bengkalis@gmail.com | https://linkedin.com/in/muhammad-azmi-/ | https://github.com/AzMy27 | https://azmy27.github.io/azmi-porto/

SUMMARY

Software Engineering graduate (GPA 3.75) with hands-on experience in building secure web applications, database modeling, and refactoring legacy systems for government administration and freelance clients. Specialized in PHP (Laravel/Livewire) and backend architecture, with a strong focus on data security, clean code, and secure RESTful API design.

SKILLS

Language: JavaScript, PHP

Front End: React JS, HTML & CSS, Tailwind

Back End: Laravel, Livewire, Node.js, Express.js, Golang

Databases & Tools: MySQL, MongoDB, Git, Postman, cPanel

Concepts: RESTful APIs, Envelope Encryption, Database Normalization, MVC Architecture

PROJECTS

Dai Bermasa **(2025)**

Cross-platform dakwah activity reporting and monitoring system developed to digitize field accountability for village religious officers (Da'i) across Bengkalis Regency.

- Engineered a centralized web-based administration and monitoring portal using Laravel and MySQL, implementing a multi-tier approval workflow (Village Head & Sub-district Coordinator) with real-time feedback notes.
- Developed an Android mobile application using Flutter (Dart) for field officers to submit daily activity logs, integrating GPS geolocation tagging and direct in-app camera capture to prevent fraudulent submissions.
- Designed RESTful APIs for seamless client-server data synchronization and executed Black Box testing following Extreme Programming (XP) iterations.

Tech stack: PHP, Laravel, Dart, Flutter, MySQL, RESTful APIs, GPS Geolocation

Laws Chicken **(2023)**

Collaborative web-based order and inventory management system developed in a 4-member team to streamline sales tracking for local culinary MSMEs.

- Architected modular backend services to handle product catalog management, order processing, and transaction calculation.
- Designed relational database schemas with normalization rules to ensure accurate stock deductions and transaction consistency.
- Collaborated via Git branching workflows and conducted API endpoint validation using Postman before front-end integration.

Tech stack: PHP, Laravel, MySQL, Tailwind CSS, Postman, Git

EDUCATION

Full Time Golang Program — Hacktiv8 Sep 2026 – Jan 2027

Jakarta, Indonesia | Transcript available

Bachelor of Software Engineering — Politeknik Negeri Bengkalis 2021 – 2025

Bengkalis, Indonesia | GPA 3.75 / 4.00

WORK EXPERIENCE

Contracted - Dinas Komunikasi, Informatika dan Statistik Kabupaten Bengkalis Jan 2026 – Des 2026

Bengkalis, Indonesia

- Modernized the Bengkalis Tower Management System from Laravel 7 to the latest framework ecosystem, resolving legacy security vulnerabilities and optimizing database query latency.

- Engineered and deployed a centralized Village ID registration and renewal portal using Laravel and Livewire, streamlining citizen records across multi-tier administrative offices.
- Implemented an official Digital Signature (e-Signature) verification service, integrating Envelope Encryption to decouple cryptographic data keys from root storage for enterprise-grade payload security.

Freelance - CV Resam Solusi Tekno Aug 2025 – Des 2025
Bengkalis, Indonesia

- Developed and deployed customizable public portal web applications for multiple village administrations using Laravel and Livewire.
- Designed responsive citizen-facing interfaces with Tailwind CSS and structured relational database schemas for village demographic tracking.
- Led end-to-end framework migrations from Laravel 10 to 12 and Livewire 2 to 3 across legacy village portals, refactoring deprecated reactive components and eliminating dependency conflicts without system downtime.

Internship - PT SOODU ID Mar 2025 – Jul 2025
Bengkalis, Indonesia

- Maintained and enhanced web-based village administrative management software utilizing Laravel and Livewire.
- Performed code debugging, handled data migration scripts, and conducted integration testing before production releases.
- Built reusable Livewire modular UI components, reducing redundant front-end boilerplate code.

CERTIFICATIONS

Junior Web Developer Vocational School Graduate Academy Digital Talent Scholarship — Digitalent BNSP (2024)
Learning to Build Front-End Web for Beginners — Dicoding (2026)
Learning to Build a Case Study Application: Directory Listing App with Express.js — CODEPOLITAN (2024)
Learning to Build Back-End Applications for Beginners — Dicoding (2024)
